

COURSE GIT

FROM YOUTUBE (Freecode camp GIT)

- Git – it's a software
- Github – it's a service provider
- Repo: the folders tracked by the git.
- Git --version : is a command to know the version of the git.
- Git status: that shows the repository tracking of the folders.
- Git init: that runs one time per project.
- These are the folders created by git.

```

-a----      22-10-2025   16:42          130
config      -a----      22-10-2025   16:42
73 description
-a----      22-10-2025   16:42          23 HEAD

```

- We can check the stage by using the command :
 Git init
 Create file1
 Git add file1 // git add .
 Then check the git status
- To commit use: git commit -m"add file1.txt" □ Then
 git push, so that the file in repository.
- Git log is the command that shows u all the info about
 the user, the files created the date,time and filenames.

```

add commit

- Git log --oneline shows u the tracking file in repository

PS C:\Users\91903\Documents\GIT learning> git log -oneline

56c833a (HEAD -> main, origin/main) Added
secondfile.txt
0146cee add secondfile.txt ed63d15
add commit ad75f97 Added
secondfile.txt
57d03ae add commit

- Till now I am working on branch main this can be checked by using: `git branch`
- Now I want to change branch from main to nav-bar for this open repositories then add a file navbar.html. □
Then in terminal use `git pull origin main`.
- Now we have to add navbar soo: `git add navbar.html`, then commit the file: `git commit -m "add navbar"`, push the file by using: `git push origin navbar`, By this the file will also add to the main branch.
- When u create a new branch u have to use the command: `git checkout -b <branchname>`
- When u are checking the branch which already exists use: `git checkout <branchname>`
- And when I want delete the branch I have created I use: `git branch -d navbar`. By this the navbar is deleted. And automatically shifts to the main branch.

□

- To merge the two branches, for suppose we want to merge the branch main and the footer branch:
First make sure u are on the branch buf fix:
`git checkout bugfix`
`git status`.
Then use : `git merge main`
Merge branch 'main' into bugfix
Resolved conflict in index.html

```
git log --oneline
d40f805 (HEAD -> bugfix) pricing card add
c43ae77 (main) images added
1d303ce updated navbar
d403352 updated main website
5936481 (footer) chang index and footer
7d3f8b0 Merge branch 'footer' <footer>    <p>&copy;
2025 My Website | All Rights Reserved</p> </footer>
c5e06f2 Added footer.html file
c51d668 (origin/nav-bar, nav-bar) add navbar
c51d8b0 (origin/main) added nav-bar.html
9fb26f3 Added index.html
060f4c3 Added .gitignore file
56c833a Added secondfile.txt
0146cee add secondfile.txt
ed63d15 add commit
ad75f97 Added secondfile.txt
57d03ae add commit
